Gzt Series Vibrating Feeder is designed through absorbing Sweden and Finland advanced technology, and it brings in vibrating motor which adopts Japanese production technology as the vibration force.

In the production process, it can feed block and granular materials of storage bin into receiving device. In stone production line, it is used to feed into crusher homogeneously and continuously, and is widely used in metallurgy, coal mining, beneficiation, building materials, chemicals and grinding materials, etc. industries.

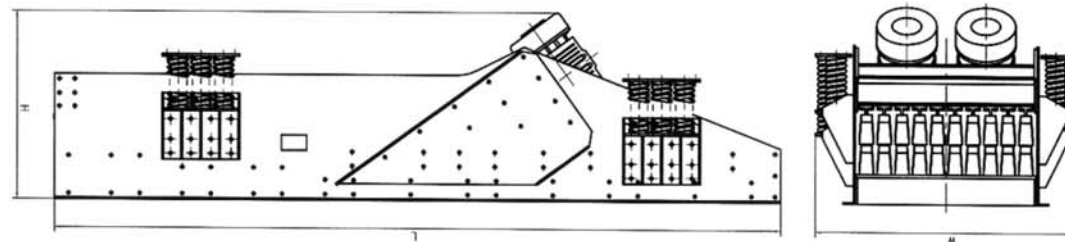

Features and Benefits

1. Product variety, customized designs, specialized manufacturing;
2. Convenient to control feed quantity manually or automatically;
3. Stable vibration, reliable operation and long life;
4. Can adjust the vibration force, and control flow can be changed at any time, convenient adjustment and stability;
5. Vibration motor is vibration source, low noise, small power consumption, good adjustment performance, no red material phenomena.
6. Simple structure, reliable operation, convenient installation;
7. Light weight, small size, easy maintenance, using a closed structure to prevent dust pollution.

Working Principle

In the production process, it can feed block and granular materials of storage bin into receiving device. In stone production line, it is used to feed into crusher homogeneously and continuously, and is widely used in metallurgy, coal mining, beneficiation, building materials, chemicals and grinding materials, etc. industries.
